Professional Summary

Backend-focused Software Engineer with nearly two years of professional Java experience building Spring Boot services, microservices, and REST/gRPC APIs. Experienced with MongoDB, automated tests, GitHub Actions workflows, and limited production deployment exposure to AWS ECS/Fargate. SQL/MySQL/JPA/Hibernate experience is from PG-DAC training and a personal project.

Technical Skills

Production Backend: Java 17, Spring Boot, Spring Security 6, Spring MVC, REST APIs, gRPC, Protocol Buffers, Microservices

Production Data: MongoDB (indexing, aggregations, Mongock/Mongobee migrations)

Project / Training Data: SQL, MySQL, Spring Data JPA, Hibernate, Flyway (PG-DAC training and in-progress Store REST API project)

Frontend: TypeScript, Ember.js, React (basic), Jetpack Compose, Kotlin

Tooling & Practices: JUnit, Mockito, Git, GitHub Actions, Gradle, Maven, Docker, Linux; AWS ECS/Fargate deployment through existing UI (limited production exposure; no infrastructure design/admin)

Professional Experience

Software Engineer, IDeaS - A SAS Company | Oct 2024 – Sep 2026 | Pune, India

- **Framework migration.** Led upgrade of Spring Boot 2.6 → 3.5, Spring Security 6 and Jakarta EE migration across 20 Java modules; resolved dependency conflicts, deprecated APIs, and behavioral changes while keeping the build green.
- **REST API design.** Designed and implemented REST APIs with pagination, filtering, and audit metadata; introduced optimistic concurrency controls to prevent conflicting updates.
- **gRPC contracts.** Defined backward-compatible gRPC service contracts using Protocol Buffers and maintained contract-style tests for cross-service compatibility.
- **MongoDB optimization.** Optimized data access with targeted indexes and bulk read patterns; batched audit retrieval to reduce database round trips and improve report generation times.
- **Full-stack delivery.** Built configuration and reporting workflows in Ember.js with TypeScript, adding reusable components and validation logic.
- **CI/CD and deployment.** Used GitHub Actions build, test, and deployment workflows; deployed services through the available UI to AWS ECS/Fargate. Did not design or administer AWS infrastructure.
- **AI-assisted engineering.** Used GitHub Copilot and agent-assisted workflows to accelerate implementation, root-cause analysis, debugging, and test scenario design, while owning design decisions and validation.

Application Developer, Data Nova India Pvt. Ltd. | Feb 2023 – May 2023 | Noida, India

- Built and maintained ERP modules as an Android developer using Kotlin, MVVM architecture, and REST API integrations.
- Implemented reusable UI components and collaborated on feature delivery within Agile sprints.

Projects

Store REST API (In Progress)

- Building a Spring Boot REST API for store management with MySQL, Spring Data JPA/Hibernate, Flyway migrations, and OpenAPI documentation.
- Implementing layered architecture with DTOs, validation, pagination, and global exception handling.

Education

PG Diploma in Advanced Computing (PG-DAC), C-DAC | Mar 2024 – Aug 2024 | Pune, India

B.Tech, Computer Science & Engineering, Dr. A.P.J. Abdul Kalam Technical University | 2020 – 2023
