Professional Summary

Backend-focused Software Engineer with nearly two years of professional Java experience building Spring Boot services, microservices, and REST/gRPC APIs. Experienced with MongoDB, automated tests, GitHub Actions workflows, and limited production deployment exposure to AWS ECS/Fargate. SQL, MySQL, JPA and Hibernate experience is from PG-DAC training and a personal project.

Technical Skills

Languages: Java, JavaScript, TypeScript, Kotlin

Backend: Spring Boot, Spring Security, REST APIs, gRPC, Protocol Buffers, Microservices

Data (production): MongoDB, Mongock/Mongobee

Data (project/training): MySQL, Spring Data JPA, Hibernate, Flyway

Frontend & mobile: Ember.js, React.js, Jetpack Compose, HTML/CSS

Engineering tools: Git, Gradle, Maven, GitHub Actions, Docker, Linux, JUnit, Mockito

CI/CD and cloud deployment: GitHub Actions build/test/deployment workflows; deployed services through the available UI to AWS ECS/Fargate (limited production exposure; no AWS infrastructure design or administration)

AI-assisted development: GitHub Copilot, prompt engineering, agent workflows, RCA, debugging, scenario generation

Professional Experience

Software Engineer, IDeaS - A SAS Company | Oct 2024 – Sep 2026 | Pune, India

- Upgraded a microservice application across 20 Java modules from Spring Boot 2.6 to Spring Boot 3.5, redesigning security configuration for Spring Security 6, migrating Jakarta APIs, and upgrading five generated API-client modules.
- Designed and implemented REST and gRPC APIs for cross-product communication, with pagination, filtering, audit information, and backward-compatible Protocol Buffer contracts validated through contract-style tests.
- Implemented concurrency controls for long-running jobs using centralized mutation guards and dedicated status APIs; connected backend state to progress tracking and conflict handling in the frontend.
- Optimized MongoDB data access using targeted indexes, bulk reads, and batched audit retrieval; developed migration logic to transform and upsert legacy records.
- Used existing GitHub Actions build, test, and deployment workflows; deployed services through the available UI to AWS ECS/Fargate without designing or administering the underlying infrastructure.

Application Developer, Data Nova India Pvt. Ltd. | Feb 2023 – May 2023 | Noida, India

- Developed ERP mobile application modules using MVVM, separating user interfaces from presentation and application logic.

Projects

UNITY - Peer-to-Peer Music Sync (Functional prototype)
Kotlin, Jetpack Compose, Media3 ExoPlayer, Coroutines, TCP/UDP

- Designed the architecture and protocol for a local-network Android music session with leader/follower control, device discovery, pairing-code joining, and synchronized queues.
- Used iterative AI-assisted development to implement TCP commands, UDP playback synchronization, local media discovery, and MediaSession controls; reviewed and refined generated code against the intended design.

Store REST API (In progress)
Spring Boot, Spring Data JPA, MySQL, Flyway, OpenAPI

- Implemented cart-management REST APIs with controller/service/repository separation, DTO mapping, request validation, exception handling, database migrations, and Swagger/OpenAPI documentation.

Education

PG Diploma in Advanced Computing (PG-DAC), C-DAC, Pune | Mar 2024 – Aug 2024

B.Tech in Computer Science & Engineering, Dr. A.P.J. Abdul Kalam Technical University | 2020 – 2023
