Professional Summary

Backend-focused Software Engineer with 2+ years of hands-on Java development building enterprise SaaS products. Designs and implements REST and gRPC APIs, Spring Boot microservices, and MongoDB-backed data access layers, with strong discipline in unit testing (JUnit/Mockito), CI/CD automation (GitHub Actions), and production debugging. Experienced in large-scale framework migrations, backward-compatible API contract evolution, and AI-assisted engineering workflows for implementation, root-cause analysis, and review.

Technical Skills

Backend: Java, Spring Boot (2.6 → 3.5), Spring Security 6, REST APIs, gRPC, Protocol Buffers, Microservices, JPA/Hibernate

Data: MongoDB (indexing, aggregations, Mongock/Mongobee migrations), MySQL

Tooling & Practices: JUnit, Mockito, Git, GitHub Actions, Gradle, Maven, Docker, Linux, OpenAPI, Flyway

Frontend: TypeScript, Ember.js, React (basic), Jetpack Compose, Kotlin

Professional Experience

Software Engineer, IDeaS - A SAS Company | Oct 2024 – Sep 2026 | Pune, India

- **REST API design.** Designed and implemented REST APIs with pagination, filtering, and audit metadata; introduced optimistic concurrency controls to prevent conflicting updates.
- **Microservices & contracts.** Defined backward-compatible gRPC service contracts using Protocol Buffers and maintained contract-style tests for cross-service compatibility.
- **Framework migration.** Led upgrade of Spring Boot 2.6 → 3.5, Spring Security 6 and Jakarta EE migration across 20 Java modules; resolved dependency conflicts, deprecated APIs, and behavioral changes while keeping the build green.
- **MongoDB optimization.** Optimized data access with targeted indexes and bulk read patterns; batched audit retrieval to reduce database round trips and improve report generation times.
- **Testing & CI/CD.** Wrote unit and contract-style tests with JUnit/Mockito and supported CI/CD pipelines with GitHub Actions for reliable delivery.
- **Production debugging.** Triaged defects, performance bottlenecks, and data issues in production services; performed root-cause analysis and corrective fixes.
- **AI-assisted engineering.** Used GitHub Copilot and agent-assisted workflows to accelerate implementation, root-cause analysis, debugging, and test scenario design, while owning design decisions and validation.
- **Full-stack delivery.** Built configuration and reporting workflows in Ember.js with TypeScript, adding reusable components and validation logic.

Application Developer, Data Nova India Pvt. Ltd. | Feb 2023 – May 2023 | Noida, India

- Built and maintained ERP modules as an Android developer using Kotlin, MVVM architecture, and REST API integrations.
- Implemented reusable UI components and collaborated on feature delivery within Agile sprints.

Projects

UNITY – Music Sync Prototype (Personal Project)

- Built a multi-device music synchronization prototype in Kotlin with Jetpack Compose and Media3/ExoPlayer, syncing playback position and state across clients in real time.
- Designed the system architecture and synchronization protocol; implemented core flows with AI-assisted development, reviewing all generated code against the design.
- Implemented local networking over TCP/UDP with coroutines for low-latency device coordination.

Store REST API (In Progress)

- Building a Spring Boot REST API for store management with MySQL, Spring Data JPA/Hibernate, Flyway migrations, and OpenAPI documentation.
- Implementing layered architecture with DTOs, validation, pagination, and global exception handling.

Education

PG Diploma in Advanced Computing (PG-DAC), C-DAC | Mar 2024 – Aug 2024 | Pune, India

B.Tech, Computer Science & Engineering, Dr. A.P.J. Abdul Kalam Technical University | 2020 – 2023
